

# Plan for Markt Development with Timeline

This file contains information regarding the tasks and time to complete each of them. This file would be updated as new changes occur and are discussed. Use it as a reference.

## Backend Developers

Team Members: Adebowale Morakinyo, Collins Joshua

Tasks Remaining: the recommendation algorithm, the post routes, the marketplace route, payment gateway (decide and work on), reconfiguration and restructuring of the entire backend to reflect the new changes discussed – the change of the database and addition of new items, the schemas etc.

### Backend Task breakdown with Timeline

- Work on the marketplace route and component to get products (20<sup>th</sup> April 2025 – 23<sup>rd</sup> April 2025)
- Develop the recommendation algorithm (23<sup>rd</sup> April 2025 – 25<sup>th</sup> April 2025).
- Add the post routes to the backend, including a post schema in the database.
- Add the seller dashboard functionality
- Add the functionality for comments for each post and plan out how these comments would look.
- Recommendation algorithm would work for posts as well.
- Add inventory (note to self... this would include ideas from the design, so check the design for anything missing in the backend)
- Retest the backend thoroughly and perform tests and sanity checks.
- Complete the chat functionality

## Frontend Developers

Team Members: Reuben Farinde, Inioluwa Badairo

Remaining Tasks: Add functionality to the pages: the orders component, the seller dashboard component, the messages component, the product display page.

### **Frontend Task breakdown with Timeline**

- The functionality for orders page
- The functionality for the Cart page
- The functionality for the Checkout page
- Add the route and design for product description
- Add a shop/seller page
- The functionality for the product details page
- Add the functionality for the marketplace page - keep in mind, there would be two routes for product display - marketplace (which would contain posts from sellers and product catalogs) and then catalogs which would just contain products (similar to the base ecommerce applications).
- The functionality of the account page (this is a joint work, since there would be seller and buyer account pages – I am expecting you at this point to use your initiatives to plan about how you would want to implement this - when the time comes, if there are any questions, let me know)
- The seller profile functionality
- Functionality for the seller dashboard
- Complete all functionality related to chats and messaging
- Functionality related to the seller invoice, returns and listing (products)
- Seller order functionality.

### **Designers**

Team Members: Emmanuel Joseph Oluwafemi, Mojuyinoluwa Pelumi Sholotan

Remaining tasks: Design the posts page, redesign the sitemap, design for mobile, add the proper chat design for buyer and seller, create a product display/details page, seller/shop details page (keep in mind that the shop page can be customized (at least to some extent) by adding pictures and descriptions and other information) - in the future, sellers would be able to change colors and other personalization functionality would be added.

### **Designers Task breakdown with Timeline**

- The posts page would be designed first with all of the features, including the catalogs (different section for catalogs, and catalogs would be gotten in terms of category – like fashion, you might like, other people bought, item of the week, etc.). This would be expanded on in more detail.
- Design the product details page
- Design the seller page – include rating and stars
- Design the chat/messaging functionality – the messaging functionality should be done in such a way that it can be accessible from at least 70% of the pages in the website (obviously excluding the signup and sign in pages).
- Design the pages for the mobile including the ones specified above

## **Mobile Devs**

Team Members: Mojinyinoluwa Pelumi Sholotan, Abraham

Remaining tasks: Design the posts page, redesign the sitemap, design for mobile, add the proper chat design for buyer and seller, create a product display/details page, seller details page.

Extra information: Each route in the API docs is put into categories. Work on each category and create services for each of them. The routes are also available on the postman collection. Let me know if you do not have access to any of the files or postman collection.

## **Mobile Developers Task breakdown with Timeline**

- Work on each available backend route and complete
- Create HTTP services for the signup and login
- Create the pages for the sign up and login based on the design
- Implement the functionality for the signup and login for both buyers and sellers
- Create the http services for orders
- Create the HTTP services for cart
- Create the HTTP services for .... the others
- Create HTTP services for the Chat

## **Marketing and Socials**

Team Members: Tomiwa Akanbi, Emmanuel Joseph

Remaining tasks: Posters around the school for viewing, Posts on social media

## **Task breakdown with Timeline**

- Make the posters to put around the selected schools.
- Paste the posters around the schools.
